NEW MODELS & IMPROVEMENTS

2025 UPDATES

NEW Model Variants

MAX·EV

New S or L Wheelbase Option

We are now starting production of the **Max-EV S**. The S will become our standard option with shorter wheelbase and 4 foot deck. The size of the cargo deck will be 41" wide by 48" long.

The bed length of the **Max-EV L** is unchanged at 50" x 60" or 5ft long.

The shorter version allows the **Max-EV S** to be more agile, reduce material cost and reduce freight costs with 5 units fitting in one trailer.

NEW Updates: Overview

MAX·EV

MAX·EV | LSV

- NEW Shorter or Longer Wheelbase Option (S/L)
 - 4 foot or 5 foot long deck
- NEW Lithium-ion Battery Packs. 6kWh version now becomes the 8kWh.
- 2025 Pricing Now Available – Pricing improvements!
- NEW Improved Drivetrain with on screen diagnostics
- NEW Base models price configurations for lower budgets
- New large color display with technical screens
- Anti-rollaway system becomes optional electric caliper

Take Your Ride Off-Road

MAX·EV

A New Generation of Interceptors

INTERCEPTOR V

- New GO-4 Interceptor V model that closer resembles the modern build of our MAX line.
- Quieter cab with more spacious entry
- Extended wheelbase with cargo deck and tool box
- New one piece super tough steel sliding doors, with sliding window
- Similar but slightly greater turning radius as Interceptor IV.
- Gas or EV version. EV version will primarily become our new 48V system. – *For the time being we will continue production of the 72V for very steep terrain cities, and continue the Int IV gas model for larger city orders.*

Parking Enforcement / Delivery Vehicle

MAX·EV

MAX·EV³

- Tadpole design, two wheels up front for increased stability.
- 8 or 16KW battery option.
- Excellent configuration for parking management
- Optional van body for last-mile delivery
- Optional RH drive (minimums may be required)
- Future sliding door option. 40–45mph speed limit

NEW Battery Packs

Further Range & More Power

New Max-EVs will now have further range and more power than ever before.

- Removed 6kWh Battery Option
- New Options have Increased Ranges
- Up to **32kWh Future Battery** Option
- Stackable, simpler plug and play system.
- Standard integrated battery heating for cold climate. Future optional battery cooling.
- 12V battery is now charged as vehicle charges

This exciting change means our customers will get more use out of any model of Max-EV and we can continue to offer competitive ranges using the best battery technology currently available.

**Range is an estimate and is quoted without accessory draw such as heat and A/C. Heavy payload, severe weather and rough terrain impact range as well.*

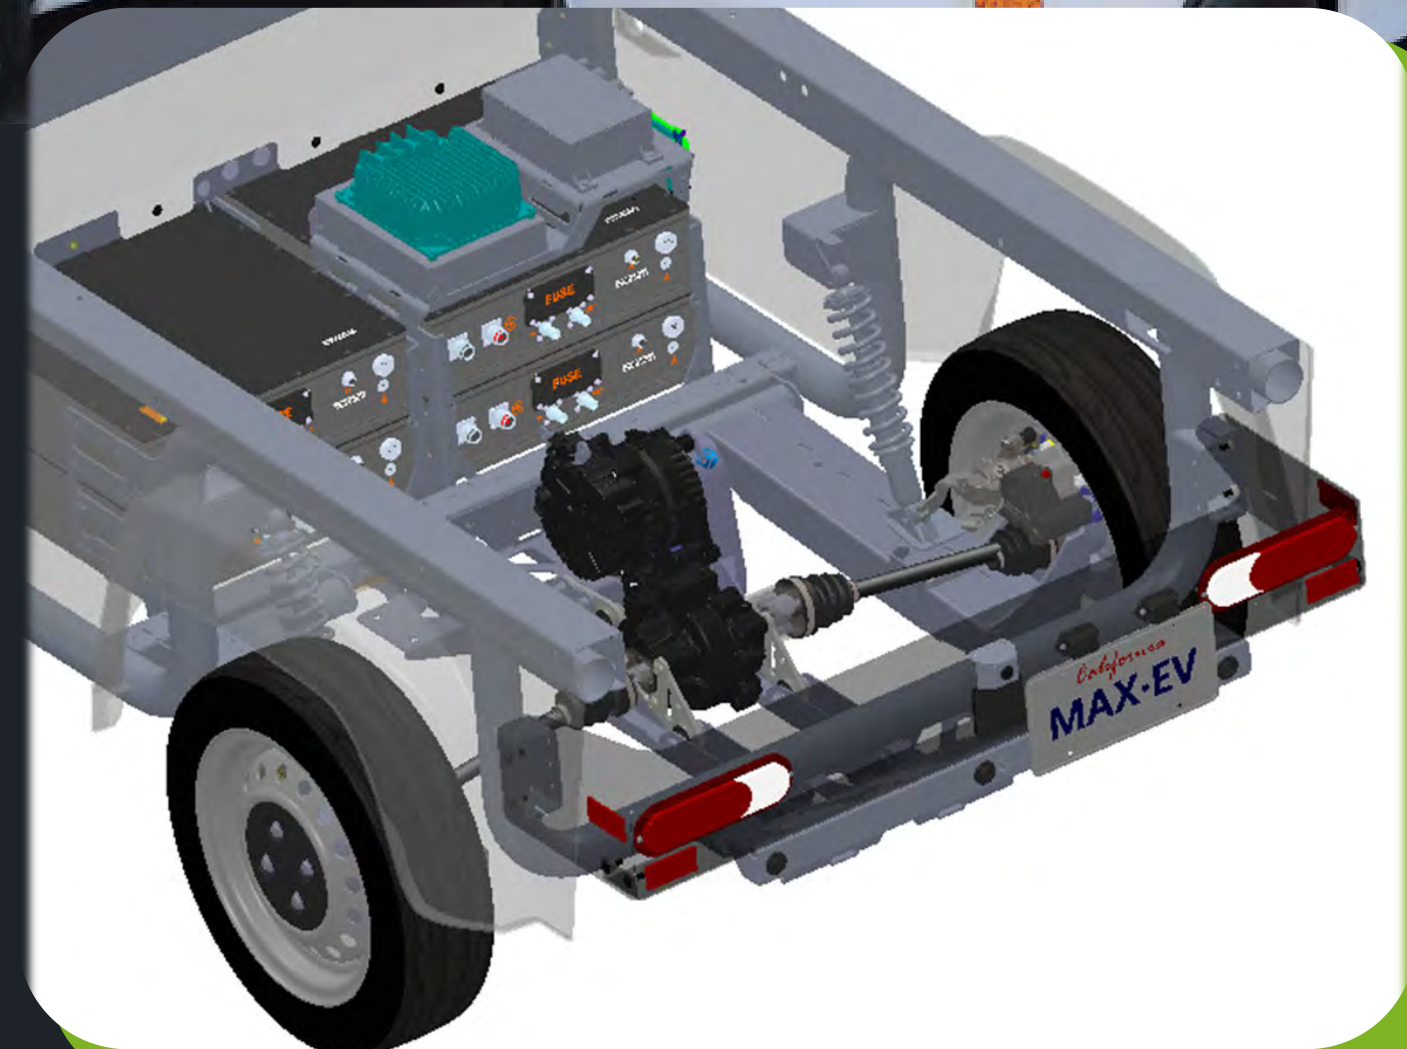

NEW Drivetrain

Reduced Cost = Increased Savings

As we continue to look for ways to improve our vehicles and make new partnerships. We have launched a new drivetrain from a global automotive leader.

This new drivetrain helps us reduce costs while keeping our vehicles performance virtually unchanged. Diagnostics codes will now be available on the display.

NEW Base Pricing Models

Prices are in USD
